*From Functional to Flawless... The Full Mouth Rehabilitation, Redo!*

## Out with the old, In with the Natural

The patient reported **difficulty in eating** and a long-standing history of **bleeding gums**, significantly affecting her oral health and quality of life.

## The Starting Point

She had previously undergone a full mouth rehabilitation with 32 crowned teeth at another practice. However, she presented to us with many teeth which were showing visible signs of **chipping** and **deterioration**.

# Treatment Done

**Bite Correction:** Her occlusion was meticulously adjusted to restore proper function and alleviate discomfort.

**Gum Health Restored:** We successfully treated the bleeding gums, promoting healthier periodontal tissues.

**Musculature & TMJ Harmony:** The treatment plan ensured that her oral musculature and temporomandibular joint (TMJ) remained in perfect harmony, preventing future complications.

**Enhanced Smile Aesthetics:** As an added benefit, we focused on improving the smile's aesthetics, achieving both functional and visually pleasing results

# Technology

**The  
2-D  
Simulation**

**The  
3-D  
Planning**

**The  
Final  
Result**

## Outcome

The patient now enjoys her food peacefully and without pain, experiencing improved oral function and a confident smile!

### **Patient Talks :**

“Now, my pain is gone, and I can eat without any problem. The best part of the treatment is I did not expect my smile will be so good .. everything feels like natural !!”
