Life!***

**A dentist in her 30s who gives others beautiful smiles felt her own
was holding her back.**

Old, patchy fillings on her front teeth left her smile uneven and dull.

**She longed for a confident, natural smile
that truly reflected her personality.**

Crafted for a Dentist, Enhanced for Life!

Treatment Done

1. Pre-Treatment

On examination, the existing composite restorations on the anterior teeth appeared discolored and worn. The fillings showed patchiness with uneven shade integration, which affected the overall esthetics of the smile.

2. Smile Test Drive

We began with a digital smile simulation to give her a preview of what her new smile could look like. This “test drive” helped her see the transformation ahead and feel assured about the treatment plan.

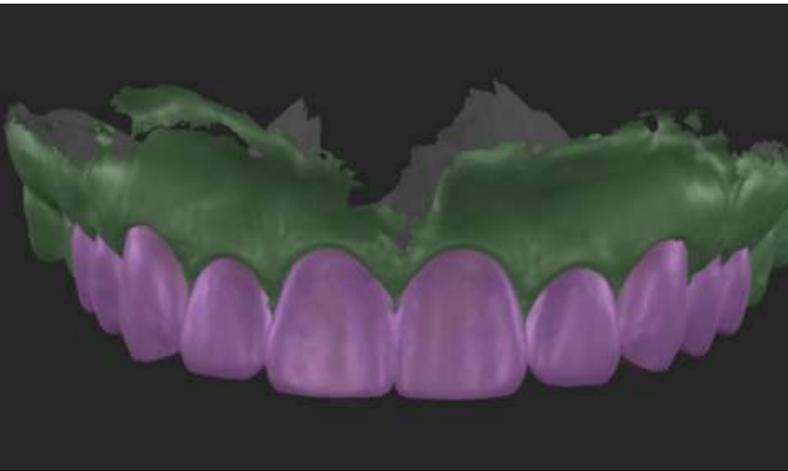

3. Post-Treatment

Her new veneers blended perfectly, creating a radiant, natural smile. More than just an upgrade from old composites, this was a transformation that gave her the confidence she desired—proof that even dentists deserve a smile makeover.
