At 60, Her Smile Found Its Second Youth.

The Starting Point

"A 65-year-old female patient sought dental care to address years of tooth wear, functional decline, and loss of smile confidence — seeking a lasting transformation.

She had been wanting to fix her teeth for years. A decade-long habit of daily lime water had gradually eroded her enamel, leading to progressive chipping and breakdown over the past 7–8 years, resulting in chipped and fractured teeth, in almost all her teeth. This left her anxious about losing her teeth and longing for a confident smile. She was upset with the way her smile was deteriorating.

At 60, Her Smile Found Its Second Youth.

Treatment Done

Facially Driven Digital Planning:

Her case was planned using full facial integration to align esthetics with facial harmony, oro facial musculature and TMJ.

3-D Test Drive & Approval:

A taste-try mock-up reflecting her desired smile was created and instantly approved by the patient.

Comprehensive Treatment Without Root Canals:

All 28 teeth were treated without root canal therapy. Functional bite tests reprogrammed her occlusion, ensuring long-term stability aligned with her esthetic goals.

Minimally Invasive, Natural Restorations:

Using guided preparation protocols and our facially driven copy-paste natural restoration technique, her smile was restored with precision and predictability.
