Beyond aesthetics - complete functional revival!

The Starting Point

He came to us with a broken bridge and a long-standing desire for a better smile. Despite having no habits like smoking or tobacco, his teeth were stained and worn, making him self-conscious. What he truly wanted was a natural-looking smile—something that felt like him. Using facially driven 3D planning and copy-paste natural restorations, we crafted a transformation that brought harmony, balance, and confidence back to his face. A smile so natural, it simply feels like it was always meant to be.

Beyond aesthetics - complete functional revival!

Treatment Done

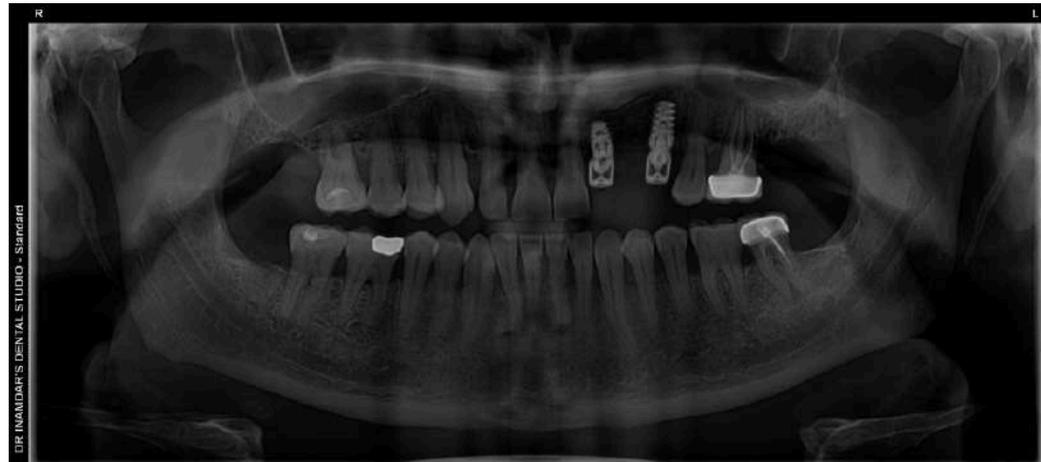

1. Smile Test Drive

He previewed his new smile with a digitally designed test drive—before starting any treatment.

2. Phase 1 : Implants Placements

In this phase, implants were placed where the bridge had failed, and healing time was allowed before the next steps.

3. Phase 2 : Implants Placements

With the implants fully healed, we placed natural-looking implant crowns and restored the remaining teeth to match in harmony. This final phase brought his long-awaited dream to life—a confident, natural smile that felt truly his own after years of compromise.

Outcome

Patient Talks :

“
I'm
definitely
smiling
now
and
I'm very
very
satisfied
with
all the
work
carried
out!

”
