Bridging the Gaps, Boosting the Glow!

The Starting Point

In her 40s, this patient came to us wanting to fix the gaps in her smile. While others suggested just veneers, we took a more thoughtful approach—six months of orthodontics to align her teeth, followed by custom veneers to perfect her smile. The result? Natural, confident, and absolutely radiant.

Bridging the Gaps, Boosting the Glow!

Treatment Done

1. Pre-Treatment

She was concerned about gaps that affected her smile and confidence.

Our focus was to offer a solution beyond just masking the issue.

2. Smile Test Drive

We simulated her future smile using digital tools, helping her visualize the result and feel confident in the treatment plan.

3. Orthodontic Phase

Conventional braces were used for 6 months to reduce the gaps and align the teeth conservatively and predictably.

4. Post-Orthodontic Space Closure

After alignment, we reassessed residual spacing to ensure symmetry and prepare the teeth for minimal restorations.

5. Final Prosthesis

Custom ceramic veneers were placed—upper 6 to 8 and 2 lower—to close remaining gaps and create a balanced, natural smile.

Outcome

Patient Talks :

“

I went
home,
saw
myself
in the
mirror
and
I
felt
confident
and
satisfied!

”
